

Maintaining your swimming pool

Basic weekly pool maintenance

- Begin brushing the walls down gently but firmly
- Turn the water hose on. Do not let the hose go under water, (There is a good reason for this)
- Fill up with water to above skimmer but not above liner (If a liner type) > Pump OFF
- Check all baskets & clean out
- If you have waste hose pipe connected to the fillers plastic waste pipe roll this out so when you backwash the filter
- Turn lever to backwash >
- Turn Pump ON
- Backwash till water clear & no more than 3 min's > Pump OFF
- Turn lever to > Pump ON
- Rinse for around 10 sec's > Pump OFF
- Turn lever to filter or if you have enough water in the pool vacuum straight to waste keeping a careful eye on the water level in the pool
- Turn Main Drain valve to > Close
- If you have 2 skimmers then close one of the ports OFF in one of the skimmers
- Open fully the 2nd port on second skimmer
- Assuming you only have one skimmer connect cornea & cleaning equipment to second skimmer fill the vacuum hose pipe up with water > Pump ON
- If you only have one skimmer connect cornea & cleaning equipment to that skimmer
- You may have a "vacuum point" use this to connect the cleaning hose too
- Begin vacuuming the floor in nice east stokes back and forth, working your way around the pool
- Constantly keep an eye on the water levels.
- Regularly stop to check and empty the baskets. If you can switch off the pump
- When you have finished cleaning the pool fill pool to correct level > Pump OFF
- Open the main drain (this is the sump in the bottom of the pool) gate valves
- Remove cleaning equipment cornea etc.
- Open second skimmers port (if you have a second skimmer)
- Re-check everything
- Turn lever on the multiport to filter
- Prime the pump and put the pump on heck everything once more
- Check water balance
- Test the pH (7.2 to 7.4). TA Calcium hardness etc.
- Shock water if necessary. Preferably in the evening
- Leave 24 hrs and Re-check, pH Balance, TA, Chlorine etc

Warning! Do not use the pool till safe to swim in

Read all instruction on the containers of any chemicals or cleaning tools and wear PPE

Read your manual carefully
